EQE 2019 – pilot project for writing Papers A, B, C and D on a computer

Several measures to modernise the EQE are currently being considered. In this framework it has been decided to run a pilot project allowing a small group of candidates to write the 2019 Papers A, B, C and D on a computer. Fifteen candidates sitting all four main examination papers in Munich will be randomly chosen and asked if they would like to volunteer to participate in the pilot. The pilot group can type their answers in a secure environment using a text editor program consisting of basic editing features. All other rules and conditions pursuant to the EQE will apply to the pilot.

The primary objective of the pilot is to gain experience in answering the EQE papers on a computer and to identify both the challenges and benefits. The outcome of the pilot should enable an informed choice regarding the potential to expand gradually to a wider group.
