Paper B

(Electricity/Mechanics)

Thursday, 9 March 2005

4 hours, second day, afternoon

Instructions to candidates for preparing their answers

I. General provisions

1. Candidates are expected to be sufficiently familiar with

   – the Guidelines for Examination in the EPO and
   – the content of the Official Journal of the EPO

   as published up to the end of the year preceding their examination.

2. It will be assumed that candidates have read the examination paper in the
   language in which they give their answer. Where this is not the case,
   candidates should indicate on the front page of their answer the language in
   which they read the paper. The same applies to candidates who, having filed a
   corresponding request when enrolling for the examination, give their answer in
   a language other than English, French or German.

3. Candidates are to accept the facts given in the paper and to limit themselves to
   these facts. Whether and to what extent these facts are used is the
   responsibility of the candidate. Candidates are not to use any special
   knowledge they may have of the field of the invention.
II. Paper B

4. In this paper, candidates should assume that a European patent application has been filed designating all the contracting states, and that the European Patent Office has issued an official communication. The paper may include a client’s letter containing instructions about the way the client wishes to prosecute the European patent application.

5. Candidates are expected to respond to all points raised in the official communication. The response should be in the form of a letter to the EPO accompanied, where appropriate, by an amended set of claims. The description should not, however, be amended.

The claims should afford the broadest possible protection while meeting the requirements of the Convention. In their letter of response candidates should set out their arguments in support of the patentability of the independent claim(s).

6. If candidates consider that any part of the application ought to be made the subject of one or more divisional applications, they should, in a note, clearly identify the features of the independent claim of such divisional application(s), for example by referring to selected portions of their claims, or, alternatively, draft the claim itself.
